

CHAIN WINDER

A unique lockable device for opening low level top or side hung windows without removing the fly screen. The winder sends out a specially designed chain which is strong enough to open most windows. The winder attaches to both framework and casement and makes opening windows as simple as turning a handle. The screen can be made fully removable for easy cleaning and maintenance.

**A COST EFFECTIVE FLYSCREEN SYSTEM
THAT CLEANS UP THE HYGIENE LEGISLATION**

LOCKING CHAIN WINDER

| | |
|----------------------|--|
| <u>How they work</u> | Simply turn the winder handle to open the window to allow varying degrees of ventilation without the inconvenience of removing the screen. When the locking button is pressed, the handle cannot be turned and can only be released with the key. |
| <u>Suitability</u> | It is necessary to remove the existing form of security, i.e.: casement stay or cockspur handles before a winder can be fitted. The winder is suitable for top opening and side hung timber, UPVC and metal casements up to approximately 1metre square. It can also be fitted to certain types of metal casement pivot windows. Windows operated by pole or pulley systems will need remote winder gear (see Flexi-con system). |
| <u>Removal</u> | The chain winder cannot be removed easily from the window after it has been fitted. |
| <u>Maintenance</u> | Smear the chain with grease periodically to ensure a smooth action and to minimise wear. |
| <u>Technical</u> | Winder dimensions – 280mm long x 45mm wide x 20mm deep. Chain reach – 300mm. Push button lockable, key release. Standard colours – Black or white only. |
| <u>Guarantee</u> | 12 months on all workmanship under normal wear and tear. |
